

Emblaze-VCON HD7000Pro version 8.0

Release Notes

July, 2008

New Features

1. High definition 720p resolution is supported for outgoing video
2. Full screen video in both standard and wide resolutions

Known Issues

- Interactive multicast and ISDN networking are not available in this version.
- Remote control is supported partially. The remote control in this version enables only dialing via the "dial" button and most shortcut keys on the remote.

Manipulating the dial dialog is as following:

Using the joystick button, right and left arrows will toggle the the following shortcut keys currently do not work:

- 1) Data
- 2) Phone Book
- 3) Camera Presets
- 4) Cam ctrl
- 5) Call Log
- 6) Settings
- 7) Mute Video
- 8) Only digits (no letters) are generated from the remote control

you can not operate the joystick in dialogs other than the dialing dialog.

- MXM Management: Some parameters do not reflect on the HD7000 UI when changing from administrator - All BW limitation fields, enable microphone, enable speakers, microphone level, MTU, G.722.1 C, AAC LD, broadcast parameter max participants, language.G.722.1 C, AAC LD, broadcast parameter max participants. Happens also with vPoint. All others work ok with vPoint.
- excel 2007 (.xlsx file type) is not supported for sharing
- Camera cascading is not available.
- There is no tone indication when sending DTMF tones
- Num Lock should be pressed in order to use the dot character on the keyboard. If Num Lock is not set, the dot character will act as "backspace"
- Languages supported: English, German only
- You can not use line-in and Microphone-in audio inputs simultaneously
- There is no call log for incoming and outgoing calls

Interoperability Problems

- There is no notification message when remote side doesn't answer the call on Tandberg MXP and Aethra X3 systems.

With VCON Products:

None
